Ichikawa et al. disclose a calculation method of a discharge and transfer amount of chemical substances, comprising: a step of inputting and storing a data which indicates a material, a use step of the material and a use amount of the material which are transmitted from a client terminal through a network; a step of searching for a database of material components storing a contained chemical substance and content thereof corresponding to the material by using the inputted material as a key, and searching for the chemical substance contained in the material and the content. However, Ichikawa et al. do not teach a step of searching for the database of a material balance coefficient which stores a ratio in which the chemical substance is discharged and transferred by every separate whereabouts of the chemical substance selected from the group including air, water basin, or a product corresponding to the chemical substance and the use step of the material by using the searched chemical substance and the inputted use step of the material as a key, and searching for the discharge and transfer ratio by every separate whereabouts when the searched chemical substance is used in the inputted use step of the material; a step of calculating the discharge and transfer amount of the chemical substances by every separate whereabouts based on the searched discharge and transfer amount, the inputted use amount of the material, and the searched contents; and a step of transmitting the calculated discharge and

transfer amount by every separate whereabouts when the searched chemical substance to a client terminal through a network; and including all of the other limitations in the respective independent claims.
